

Pa'ina Irradiator

On June 27, 2005, the U.S. Nuclear Regulatory Commission (NRC) received a [license application](#) from Pa'ina Hawaii that would authorize the use of sealed radioactive sources in an irradiator for the production and research irradiation of food, cosmetic, and pharmaceutical products. The proposed irradiator would be located immediately adjacent to Honolulu International Airport on Palekona Street near Lagoon Drive. The irradiator would primarily be used for phytosanitary treatment of fresh fruit and vegetables bound for the mainland from the Hawaiian Islands and similar products being imported to the Hawaiian Islands as well as irradiation of cosmetics and pharmaceutical products. The irradiator would also be used by the applicant to conduct research and development projects, and irradiate a wide range of other materials as specifically approved by the NRC on a case-by-case basis.

The NRC has completed its initial evaluation of the proposed irradiator against the requirements found in the NRC's regulations at Title 10 of the Code of Federal Regulations, Part 36, "Licenses and Radiation Safety Requirements for Irradiators," (i.e., 10 CFR Part 36). Typically, the licensing of irradiators is categorically excluded from detailed environmental review as described in the NRC regulations at 10 CFR 51.22(c)(14)(vii). However, the NRC staff entered into a settlement agreement with Concerned Citizens of Honolulu which included a provision for the NRC staff to prepare a draft [environmental assessment](#) and hold a public comment meeting in Honolulu, Hawaii prior to making a final decision. In support of the staff's environmental review, the NRC obtained contract assistance from the Center for Nuclear Waste Regulatory Analysis for the preparation of a [Topical Report](#) which discusses potential impacts from aviation accidents and natural phenomena.

The NRC staff held a public comment meeting on the draft EA on February 1, 2007 at the Ala Moana Hotel in Honolulu with approximately 80 members of the public in attendance. The NRC staff presented a brief [presentation](#) of the draft EA and then took public [comments](#) and [submissions](#). After the public meeting, approximately 270 public [comments](#) were received. The staff is in the process of responding to public comments and completing the Environmental Assessment.

In addition, the staff has issued a supplemental [appendix](#) to the draft EA which presents the staff's consideration of terrorist attacks on the proposed facility. Members of the public are invited and encouraged to submit comments on this supplement to the Chief, Rules Review and Directives Branch, Mail Stop T6-D59, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001. Please note Docket No. 030-36974 when submitting comments. Comments will also be accepted by e-mail at NRCREP@nrc.gov or by facsimile to (301) 415-5397, Attention: Matthew Blevins. Please submit comments by **July 9, 2007**.
